EXAMINER PATEL, MANGLESH M				
ART UNIT 2178		PAPER NUMBER		
MAIL DATE 03/21/2008		DELIVERY MODE PAPER		

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/628,959

Applicant(s)

HEFETZ ET AL.

Examiner

MANGLESH M. PATEL

Art Unit

2178

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 January 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-25 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-25 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SG/US)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

1. This Non-Final action is responsive to the RCE filed on 1/9/2008.
2. Claims 1-25 are pending. Claims 1, 6, 10, 14, 18 and 21 are the independent claims.

Withdrawn Rejections

3. The 35 U.S.C. 103(a) rejections of claims 1-25 with cited reference of Velonis (U.S. 6,772,408) has been withdrawn in light of the amendment.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

5. Claims 1-25 are rejected under 35 U.S.C. 102(e) as being anticipated by Dulepet (U.S. 7,316,003, filed Dec 18, 2002).

Regarding Independent claim 1, a method comprising:

- Providing a design-time translator and a run-time translator that both correspond to a defined page element;
- During design-time for a page, invoking the design-time translator for a page template including the defined page element having one or more content components, said design-time invoking resulting in the defined page element in the page template being translated into a design-time representation of the one or more content components in the page, the design-time representation being rendered in accordance with a predefined layout of a container for the components, the page template being available to a plurality of remote users of a portal; and
- During run-time for the page, invoking the run-time translator for the page template, said run-time invoking resulting in the one or more content components being obtained and the

defined page element in the page template being translated into a run-time presentation of the obtained one or more content components in accordance with the layout of the container.

Dulepet teaches creation/editing of a dynamic web page using a WYSIWYG editor. He describes the use of a design time engine which in response to a controller-deployed dynamic page request, the design time engine replaces the dynamic code JSP elements with a design time component, such a component comprises a content placeholder representative of content that would have been generated by a JSP container if the controller had deployed the dynamic code element to an executing JSP container. Furthermore the page template is available to a plurality of remote users of a portal because the Merged model in fig 2 synchronizes the updated from the editor in design-time to the application database server thus making it available to the remote users of the portal. He then describes that during run-time upon receiving the source code, JSP container replaces dynamic source code elements within the source code with dynamically generated page content, and returns a dynamically generated web page (see abstract, fig 2-3, column 1, lines 5-67, column 2, lines 10-50, column 2, lines 55-67, column 3, lines 1-52, column 6, lines 5-58 & column 5, lines 50-67).

Regarding Dependent claim 2, which depends on claim 1, Dulepet discloses wherein said invoking the design-time translator further results in presentation of a WYSIWYG layout editor using the design-time representation of the one or more content components in the page (column 2, lines 10-50, column 2, lines 55-67, including the explanation provided in the Independent claims).

Regarding Dependent claim 3, which depends on claim 2, Dulepet discloses wherein the said invoking the design-time translator further results in client-side scripting components being included in the design-time representation to form at least part of the WYSIWYG layout editor and enable adding a content component to a content container using a drag-and-drop action (column 2, lines 10-50, column 2, lines 55-67, including the explanation provided in the Independent claims).

Regarding Dependent claim 4, which depends on claim 2, Dulepet discloses wherein the page template comprises a portal page template, and the WYSIWYG layout editor comprises a WYSIWYG portal page

layout editor (column 6, lines 5-58 & column 5, lines 50-67, including the explanation provided in the Independent claims).

Regarding Dependent claim 5, which depends on claim 4, Dulepet discloses wherein the defined page element comprises a custom Java Server Page tag and the design-time translator and the run-time translator comprise Java Server Page tag handlers for the custom Java Server Page tag, and wherein the run-time translator obtains portal dynamic content according to the portal page template and the design-time translator does not (column 1, lines 5-67, column 2, lines 10-50, column 2, lines 55-67, column 3, lines 1-52, including the explanation provided in the Independent claims).

Regarding Independent claim 6, an article comprising a machine-readable medium storing instructions operable to cause one or more machines to perform operations comprising:

- During design-time of a portal page, translating a placeholder in a portal template into a design-time representation of a container designed to present portal dynamic content associated with the placeholder, and presenting a WYSIWYG portal layout editor using the design-time representation of the container designed to present the portal dynamic content, the run-time presentation being presented in accordance with the layout of the container, the portal template being accessible to a plurality of users of a portal and including a predefined placement of the placeholder;
- During run-time of a portal page, obtaining the portal dynamic content from a dynamic content source, and translating the placeholder in the portal template into a presentation of the container and the obtained portal dynamic content, the run-time presentation being presented in accordance with the layout of the container, the obtained portal dynamic content being personalized for a current user of the portal and at least one associated role of the current user.

Dulepet teaches creation/editing of a dynamic web page using a WYSIWYG editor. He describes the use of a design time engine which in response to a controller-deployed dynamic page request, the design time engine replaces the dynamic code JSP elements with a design time component, such a component comprises a content placeholder representative of content that would have been generated by a JSP container if the controller had deployed the dynamic code element to an executing JSP container. Furthermore the page template is available to a plurality of remote users of a portal because the Merged

model in fig 2 synchronizes the updated from the editor in design-time to the application database server thus making it available to the remote users of the portal. He then describes that during run-time upon receiving the source code, JSP container replaces dynamic source code elements within the source code with dynamically generated page content, and returns a dynamically generated web page (see abstract, fig 2-3, column 1, lines 5-67, column 2, lines 10-50, column 2, lines 55-67, column 3, lines 1-52, column 6, lines 5-58 & column 5, lines 50-67).

Regarding Dependent claim 7, which depends on claim 6, Dulepet discloses wherein translating the placeholder during design-time comprises adding code enabling editing of the portal page, the added code forming at least part of the WYSIWYG portal layout editor (column 2, lines 10-50, column 2, lines 55-67, including the explanation provided in the Independent claims).

Regarding Dependent claim 8, which depends on claim 7, Dulepet discloses wherein the added code comprises client-side scripting that enables addition of a content component to a content container in the portal page using a drag-and-drop action (column 2, lines 10-50, column 2, lines 55-67, including the explanation provided in the Independent claims).

Regarding Dependent claim 9, which depends on claim 6, Dulepet discloses wherein the placeholder comprises a custom Java Server Page tag, said translating the placeholder during design-time comprises invoking a design-time Java Server Page tag handler corresponding to the custom Java Server Page tag, and said translating the placeholder during run-time comprises invoking a run-time Java Server Page tag handler corresponding to the custom Java Server Page tag (column 1, lines 5-67, column 2, lines 10-50, column 2, lines 55-67, column 3, lines 1-52, including the explanation provided in the Independent claims).

Regarding Independent claim 10, A machine-implemented method comprising: selectively interpreting a portal page template based on a mode of operation, wherein the interpreting results in presentation of a design-time application operable to enable a plurality of remote users of a portal to edit the portal page template if the mode of operation is design-time, and the interpreting results in presentation of a run-time application operable to interact with portal dynamic content if the mode of operation is run-time, the portal page template including a container defining a predefined layout of content, the content presented differently

at design-time and run-time, and presentation of the content at design-time and run-time being in accordance with the layout, dedicated tag-based placeholders marking locations for the container, content components that can be determined at design-time being displayed in a WYSIWYG manner during design time, dynamic components that cannot be determined at design-time being replaced with stand-in representation during design-time, the dynamic components displayed during run-time being personalized based on a current user of the portal and any associated roles for that user.

Dulepet teaches creation/editing of a dynamic web page using a WYSIWYG editor. He describes the use of a design time engine which in response to a controller-deployed dynamic page request, the design time engine replaces the dynamic code JSP elements with a design time component, such a component comprises a content placeholder representative of content that would have been generated by a JSP container if the controller had deployed the dynamic code element to an executing JSP container. Furthermore the page template is available to a plurality of remote users of a portal because the Merged model in fig 2 synchronizes the updated from the editor in design-time to the application database server thus making it available to the remote users of the portal. He then describes that during run-time upon receiving the source code, JSP container replaces dynamic source code elements within the source code with dynamically generated page content, and returns a dynamically generated web page (see abstract, fig 2-3, column 1, lines 5-67, column 2, lines 10-50, column 2, lines 55-67, column 3, lines 1-52, column 6, lines 5-58 & column 5, lines 50-67).

Regarding Dependent claim 11, which depends on claim 10, the claim describes a method that contains the same limitations as claim 1 and is rejected under the same rationale.

Regarding Dependent claim 12, which depends on claim 11, Dulepet discloses wherein said invoking the design-time translator further results in client-side scripting components being included in the representation to form at least part of the design-time application and enable adding a content component to a content container in the portal page template using a drag-and-drop action (column 1, lines 5-67, column 2, lines 10-50, column 2, lines 55-67, column 3, lines 1-52, column 6, lines 5-58 & column 5, lines 50-67, including the explanation provided in the Independent claims).

Regarding Dependent claim 13, which depends on claim 11, the claim describes a method that contains the same limitations as claim 5 and is rejected under the same rationale.

Regarding Independent claim 14, the claim describes an article that contains the same limitations as claim 10 and is rejected under the same rationale.

Regarding Dependent claim 15, which depends on claim 14, the claim describes an article that contains the same limitations as claim 1 and is rejected under the same rationale.

Regarding Dependent claim 16, which depends on claim 15, the claim describes an article that contains the same limitations as claim 12 and is rejected under the same rationale.

Regarding Dependent claim 17, which depends on claim 15, the claim describes an article that contains the same limitations as claim 5 and is rejected under the same rationale.

Regarding Independent claim 18, a portal system comprising:

- A WYSIWYG portal layout editor that uses a selectively interpreted portal page template to reveal a WYSIWYG layout context for portal dynamic content without obtaining the portal dynamic content, the portal page template including a container defining a layout of content displayed differently at design-time and run-time in accordance with a first tag handler and a second tag handler, the WYSIWYG portal layout editor being accessible to a plurality of remote users of the portal system;
- the first tag handler implementing a first custom action for a custom tag during portal design-time, wherein the WYSIWYG portal layout editor uses the first tag handler with the selectively interpreted portal page template to facilitate editing of the selectively interpreted portal page template, content of the first tag handler being presented in accordance with the layout;
- the second tag handler implementing a second custom action for the custom tag during portal run-time, wherein the portal system uses the second tag handler during portal run-time to obtain and reveal the portal dynamic content, the portal dynamic content of the second tag handler being presented in

accordance with the layout, the obtained portal dynamic content being personalized for a current user of the portal system and at least one associated role of the current user.

Dulepet teaches creation/editing of a dynamic web page using a WYSIWYG editor. He describes the use of a design time engine which in response to a controller-deployed dynamic page request, the design time engine replaces the dynamic code JSP elements with a design time component, such a component comprises a content placeholder representative of content that would have been generated by a JSP container if the controller had deployed the dynamic code element to an executing JSP container. Furthermore the page template is available to a plurality of remote users of a portal because the Merged model in fig 2 synchronizes the updated from the editor in design-time to the application database server thus making it available to the remote users of the portal. He then describes that during run-time upon receiving the source code, JSP container replaces dynamic source code elements within the source code with dynamically generated page content, and returns a dynamically generated web page (see abstract, fig 2-3, column 1, lines 5-67, column 2, lines 10-50, column 2, lines 55-67, column 3, lines 1-52, column 6, lines 5-58 & column 5, lines 50-67).

Regarding Dependent claim 19, which depends on claim 18, Dulepet discloses wherein the first tag handler interprets the portal page template by including client-side scripting that enables addition of a content component to a content container in the portal page template using a drag-and-drop action (column 2, lines 10-50, column 2, lines 55-67, including the explanation provided in the Independent claims)

Regarding Dependent claim 20, which depends on claim 18, the claim describes a system that contains the same limitations as claim 5 and is rejected under the same rationale.

Regarding Independent claim 21, a system comprising: means for building a portal layout template for a portal that governs generation of a portal presentation having dynamic run-time content, wherein the means for building includes means for revealing the portal presentation as governed by the layout template during design of the layout template, without running the dynamic run-time content, the layout template including a container defining a layout of content, the content displayed differently at design-time and run-time, and presentation of the content at design-time and run-time in accordance with the layout; and means for

customizing at least a portion of the dynamic run-time content based on a current user of the portal and an associated role of the current user.

Dulepet teaches creation/editing of a dynamic web page using a WYSIWYG editor. He describes the use of a design time engine which in response to a controller-deployed dynamic page request, the design time engine replaces the dynamic code JSP elements with a design time component, such a component comprises a content placeholder representative of content that would have been generated by a JSP container if the controller had deployed the dynamic code element to an executing JSP container. Furthermore the page template is available to a plurality of remote users of a portal because the Merged model in fig 2 synchronizes the updated from the editor in design-time to the application database server thus making it available to the remote users of the portal. He then describes that during run-time upon receiving the source code, JSP container replaces dynamic source code elements within the source code with dynamically generated page content, and returns a dynamically generated web page (see abstract, fig 2-3, column 1, lines 5-67, column 2, lines 10-50, column 2, lines 55-67, column 3, lines 1-52, column 6, lines 5-58 & column 5, lines 50-67).

Regarding Dependent claim 22, which depends on claim 21, Dulepet discloses wherein the means for revealing the portal presentation includes means for facilitating client-side editing of the portal layout template (column 1, lines 5-67, column 2, lines 10-50, column 2, lines 55-67, column 3, lines 1-52, including the explanation provided in the Independent claims).

Regarding Dependent claim 23, which depends on claim 1, Dulepet discloses wherein the during design-time comprises a period during which editing for the page is supported and the during run-time comprises a period during which editing for the page is supported and the during run-time comprises a period during which editing of the page is not supported (column 1, lines 5-67, column 2, lines 10-50, column 2, lines 55-67, column 3, lines 1-52, including the explanation provided in the Independent claims).

Regarding Dependent claim 24, which depends on claim 1, Dulepet discloses wherein the design-time translator is part of a WYSIWYG layout editor, and the run-time translator is part of the run-time system that

Art Unit: 2178

supports presenting the page without supporting editing of the page (column 2, lines 10-50, column 2, lines 55-67, column 3, lines 1-52, including the explanation provided in the Independent claims).

Regarding Dependent claim 25, which depends on claim 1, Dulepet discloses wherein the design-time translator is a WYSIWYG layout editor and changes to the layout of the container at design-time with the WYSIWYG editor are reflected in the layout of the design-time representation and the run-time presentation (column 2, lines 10-50, column 2, lines 55-67, column 3, lines 1-52, including the explanation provided in the Independent claims).

It is noted that any citation [[s]] to specific, pages, columns, lines, or figures in the prior art references and any interpretation of the references should not be considered to be limiting in any way. A reference is relevant for all it contains and may be relied upon for all that it would have reasonably suggested to one having ordinary skill in the art. [[See, MPEP 2123]]

Response to Arguments

6. Applicant's arguments filed 1/9/2008 have been fully considered but are moot in view of the new grounds of rejections.
